WORK EXPERIENCE

Project Drawing Department/R&D

2011- 11 / 2012 - 10

Aysan Shelf Systems Ltd Sti

Upon the request from the customers, I designed the area where the products will be used with the help of Autocad and prepared a layout plan. In the R&D department, I made the drawings

for the produced shelves to be mounted according to the diagonal center of gravity and the product technical drawings for laser cutting in line with the needs.

2014 – 02 / 2014 – 04

Special Furniture Industry

I processed the holes of the raw furniture materials produced with a CNC machine and made them ready for assembly. I informed my co-workers about the production process about quality and product deadlines.

2014 – 04 / 2022 – 04

Europtech GmbH

CNC Intermac

For the grinding process of the cut raw glasses, I prepared the sets in CNC Intermac machines and drew the technical drawing of the product. I set up the machine for production and made the necessary adjustments. By providing quality control on the first product, I made the machine ready for production.

Flow Water Jet / Water Jet Sweden

I prepared the Flow Water Jet machine for the products coming from the cutting department or the running-in section and made the product ready for production by making the necessary technical drawings with the help of CAD.

During the serial production, I continued the production in the highest quality and efficient way by following the quality standards with intermediate controls.

As a final step, I packed the production for the next process and made it ready by writing the necessary notes on the business form.

2022 – 05 / -

Askon Iron and Steel Co. Ltd.

By following the workflow of the operators in the production area, I provide the final controls and start the packaging process.

I provide quality control of the manufactured products, with measuring devices (caliper, gauge, inclinometer or protractor) and DWG and PDF, in line with the customers' request.

Negative and faulty productions are rejected at the quality control stage by means of customer representatives, I provide feedback on the necessity of applying quality standards, and I start work to move on to the production stage.
